

Draft As Of:
June 23, 2013

Topic: A Fairfax VA Community Vitality Project Pre-Proposal (Opportunistic 2014)

01. Draft Name: Fairfax Community Biolab with Thoreau's Pond (Louisa May's Pond) (FCB_TP)

Proposed Website: <http://LMPOND.DoublehelixTwin.Net>

On proposed Louisa May's Pond as first choice for this proposed healing pond at Fairfax near the Fairfax INOVA Hospital Location if possible as a logical choice. Please see on going conversation at Fairfax Underground Community Forum, one of the top community forums in the nation in my assessment after "due diligence". Several thousand residents are discussing topics of interest to them each day at Fairfaxunderground.com.

(This experimental protocol is courtesy of Fairfax County Chamber of Commerce, the largest chamber of commerce in Virginia). Please search this forum at Fairfaxunderrground.com: This conversation started Mid-May, 2013 is titled

"A Healing Garden Demo Twin near INOVA Fairfax Hospital Possible?"

02. Success Model 01: A Nature Center with Pond & Local Habitat Aquarium near Richmond, VA that serves as a healing garden, nature educational center for kids and families.

The place is maintained by County Park Service and opens to the public for free. Model 01: Three Lakes Park & Nature Center

<http://www.co.henrico.va.us/rec/recreation-centers-facilities/three-lakes-park-nature-center/>

03. **Success Model 02:** A Community biolab in NYC called Genespace. Genespace.org is a fully-equipped biotechnology lab serving the New York Community. URL: <http://www.gnespace.org>

04. **Fairfax Community Biolab + Thoreau's Pond Prototype Design**

Proposed Model for Fairfax VA model combines these two existing models and adds some additional affordable and easy to do element that adds value for community vitality through arts and science. Collective wisdom is added with conversation Fairfax Community to Community Café Twin. The proposal reflects the idea that two often seemingly unrelated topics can be combined often to create innovation and value to stakeholders.

In this case the stakeholders are citizens of Fairfax VA community of two million residents as primary beneficiary envisioned. Project proposal contribution is aimed at the top three goals that our wise elected County Supervisors have set as given at the Fairfax County Government website for all to see. The top three goals to which FCB_TP will contribute are both near term and long term as follows: *in order of priority* given.

The Fairfax County Board of Supervisor priorities are as follows (Monitoring these as given in the Fairfax County Government website for all to see) currently at June, 2013.

(01) Fairfax Supervisors Priority 01: Strengthen Education

Knowledge Economy future requires strengthening education in public schools K-12 where majority of resident kids attend. Challenge is to motivate kids to future careers via STEM linked activities. Motivating kids to invest emotions and other necessary resources to careers of the future in life sciences and physical sciences remain a key challenge to knowledge economy infrastructure 2050 Report Card and 2020 Report Card (previous TEDx Talk)

(02) Fairfax Supervisors Priority 02: Community Safety

Community Safety is more than just added police force. Residents to take ownership of their own neighborhoods is a key challenge for community vitality (See my Internet published photo article based on my two years + of community service activity as a Community TV production volunteer titled "**An Urban Community of Vitality Success Model Hometown USA _ Herndon Virginia**")

(03) Fairfax Supervisors Priority 03: Healthier Community

Healthier community has key implications for community vitality via arts and Science Bridge. Tech Innovators support culture for tech entrepreneurs and innovators will allow small tech biz and others to add value by inventions and inventions. As a community support culture at Fairfax we have to think beyond expanding "retail space" and retail jobs as a key focus for revitalization. Retail jobs adds minimum wage jobs for our young people and poor people, and not the high paying jobs for scientists and engineers who have invested in education and practical experience in local labs and factories where early diagnostic tools, and life science products are developed through technology development process and protocol. There is nothing more available that "Technology" for research university labs, and government labs around the nation.

What is precious and need husbandry is tech innovators and entrepreneurs so that technology development to successful products and services via innovation will take place more often with rare gifted few as I have discussed in my brief video intro of such as rare young people as "Thomas Edison" during our American Civil War (1861-1865), and the "Gallivant Knights" of the past in America and elsewhere.

This wisdom of history can be incorporated by the proposed
